PROJECT MANAGEMENT

About Us

ABT Power Management's **Critical Facility Services** offer a total integration of products, services, and management, eliminating the inconvenience of dealing with multiple vendors and subcontractors.

ABT succeeds at delivering a lower cost of ownership and high return on investment for our clients.

Project Management

ABT will manage your critical infrastructure project from plan review to lead times to completion; from formal bid packages to order confirmation; from a simple UPS system to a large Megawatt power generation plant. Our capabilities include:

- Operational and capital projects
- Owner's representation and witness testing
- Commissioning and decommissioning services
- Asset management and control
- Vendor/supplier management and accountability
- Warranty compliance and coverage

Facilities Management

We partner with industry professionals, utilizing the best practices and manufacturer recommended procedures to maintain the entire critical infrastructure:

- Annual management and testing programs
- Guaranteed maintenance schedule and fixed cost
- Contingency planning and disaster recovery
- Joint Commission on Health Care Organizations compliance (JCHCO)
- Facility, data center and critical path audits
- 7x24x365 emergency response
- Root cause failure analysis and remediation

Equipment Procurement and Removal

- Facilitate new equipment for any mission critical service need
- Removal of decommissioned and/or old equipment
- Extensive nationwide network of product specialists at your disposal
- Turn-key project management

Analyzing your most critical needs always starts with a site assessment. Contact us to schedule one today.
